

Fridays with Friends

4K and 2nd grade friends made May baskets. May baskets are a fun and creative way for students to celebrate the arrival of spring and to show their appreciation for the special people in their lives. The baskets were anonymously left in the staff mailboxes as a May Day surprise.

In celebration of May, the Friday friends also got together and helped paper flowers bloom! Through this experiment, students experienced how osmosis works. As the paper flowers absorbed the water, the water molecules moved into the cells of the paper, causing them to expand and BLOOM!

Wishing you a
May Day
that is **bright** with
happy moments!
