

# EXPERA SPECIALTY SOLUTIONS

Fifth grade students learned how paper is made from Bob Blume and employees from Expera Specialty Solutions.

Students dip a screen in the barrel filled with water and wood fibers. When they bring it up the wood fibers form a piece of paper.

From  
tree...

...to paper

After taking from the screen the paper is put in a dryer.

A salt solution is put on the paper to make it flame proof. The girls can't resist tasting it.

Wesley and Cody use ink pencils to write on the wet paper before it goes in the dryer.

We thank **Bob Blume** and the employees for Expera Specialty Solutions for bringing this informative demonstration to St. Mary's!
